

ExpenSense User Guide

Sep 29, 2026 · @Ryan

Overview

ExpenSense is a personal expense tracker that turns receipt photos into verified expense records and shows where your money goes. It runs on Android (APK) and in any web browser, and it keeps working offline.

Version	Where to get it
Android app (APK)	Download the latest APK
Web app	expensense.expo.app

You need an email address to create an account. Receipt scanning needs an internet connection; everything else works offline.

Getting started

Install the app, create an account, and you land on the Home screen.

Install on Android

1. Open the APK download link on your phone.
2. Tap the downloaded file. If Android asks, allow your browser to install unknown apps.
3. Tap **Install**, then **Open**.

Create an account

1. Swipe through the three onboarding pages, or tap **Get Started**.
2. Enter your full name, email and a password, then tap **Create Account**.
3. Open the verification email and tap the link, then return to the app.

Sign in

1. On the first screen, tap **I already have an account**.
2. Enter your email and password, then tap **Sign In**.

Forgot your password

1. On the Sign In screen, tap **Forgot password?**
2. Enter your email and tap **Send Reset Link**.

3. Open the email and tap the link. It opens the **Create a new password** screen.
4. Enter and confirm the new password, then tap **Update Password**.
5. Sign in again with the new password.

For security, a reset link that is opened but not finished never leaves you signed in.

Getting around

The bottom bar has five buttons: **Home**, **Transactions**, **Scan**, **Analytics** and **Wallet**. The round menu button opens **Settings**, **Notifications** and **FAQ**.

Scanning a receipt

A receipt photo becomes a saved expense in four steps: capture, automatic reading, review, save.

1. Tap **Scan** in the bottom bar.
2. Choose **Scan Receipt** to use the camera, or **Upload Receipt** to pick a photo from your gallery. Allow camera access the first time.
3. Hold the phone over the whole receipt and take the photo. Tap **Retake Photo** if it is blurry.
4. Wait while the app reads the receipt. It finds the merchant, date and time, items, subtotal, 12% VAT and total.
5. On the review screen, check every field. Correct anything that was read wrong, pick a **Category** and a **Wallet**.
6. Tap **Confirm & Save**. The expense appears in Transactions and the wallet balance goes down.

Good to know

- Each account has **10 receipt scans**. Manual entry is unlimited.
- If the app cannot read the photo, tap **Try Again** or **Fill In Details Myself** to type it in.
- Saving the same receipt twice is blocked, so an expense is never counted double.
- Scanning needs internet. The receipt photo is stored privately with the expense.

Adding and managing transactions

Any spending without a receipt can be typed in by hand, and every saved record can be viewed, edited or deleted.

Add an expense by hand

1. Tap **Scan**, then **Manual Entry**.

2. Fill in **Amount**, **Merchant / Description**, **Category**, **Wallet** and **Date & Time**. **Notes** are optional.
3. Tap **Save Expense**.

Record income or a transfer

1. From the Wallet screen, choose **Cash-in** to add income, or **Transfer** to move money between wallets.
2. For a transfer, pick **From wallet** and **To wallet**, enter the amount and any **Transfer fee**.
3. Save. Both wallet balances update at once.

View, edit or delete

1. Tap **Transactions** in the bottom bar. Use **Sort** and the category filter to find a record.
2. Tap a transaction to see its details and receipt photo.
3. Tap edit, change the fields, then **Save Changes**.
4. To remove it, tap **Delete** and confirm. The wallet balance is restored.

Wallets

Wallets hold your money sources, such as cash, a bank account or an e-wallet, and their balances update automatically with every transaction.

1. Tap **Wallet** in the bottom bar.
2. Tap **Add Wallet**, enter a **Wallet name** and **Starting amount**, then tap **Save Wallet**.
3. Tap a wallet to open its details and recent transactions.
4. To rename it or change its details, tap **Edit Wallet**, then **Save Wallet**.

Every expense, cash-in and transfer is linked to a wallet, so the balances always match your records.

Categories, budgets and goals

Budgets cap monthly spending per category; goals track money you are saving toward a target.

Set a category budget

1. Open **Categories** and tap a category.
2. Enter a **Budget amount** and save.
3. Spending in that category now counts against the budget, and you get a **Budget alert** as you near the limit.
4. To stop tracking it, tap **Remove Budget**.

To add your own category, tap **Add Custom Category** and enter a **Category name**. Tap **Hide Category** to hide one you do not use.

Create a savings goal

1. Open **Goals** and tap **Add Goal**.
2. Enter a **Goal name**, **Target amount** and an optional **Target date**, then save.
3. Whenever you save money, open the goal and enter an **Amount to add**.
4. When a goal is done or no longer needed, tap **Archive**. Your wallets and expenses are not affected.

Dashboard, analytics and notifications

Four screens turn your records into a picture of your spending.

Screen	How to open it	What it shows
Home	Home in the bottom bar	This month's calendar, total spent and daily average; tap a day to see its total
Analytics	Analytics in the bottom bar	Spending by category and by day, highest-spend day, income vs expenses
Insights	From the Home or Analytics screen	Tips based on your budgets, such as how much you can still spend per day
Notifications	Round menu, then Notifications	Budget alerts, transaction reminders and spending insights

Choose which alerts you receive in **Settings > Notifications**.

Settings

Open Settings from the round menu. Each option is one tap away.

Option	What you can do
Account Information	Change your full name; see your email and member-since date
Change Password	Enter and confirm a new password, then tap Update Password
Appearance	Pick Light (default), Dark or Match device

Option	What you can do
Notifications	Turn budget alerts, transaction reminders and spending insights on or off
Privacy & Data	See what ExpenSense stores and why
Help & Support	Answers to common questions (also under FAQ in the round menu)
About	App version and build details
Log Out	Sign out of this device

Offline mode and troubleshooting

Without internet, you can still view your data and add, edit or delete expenses; changes are saved on the phone and upload automatically when you are back online. Only receipt scanning and account actions need a connection.

Problem	What to do
Android will not install the APK	Allow your browser to install unknown apps in Android settings, then tap the file again
"You have used all 10 receipt scans"	Add expenses with Manual Entry ; it has no limit
The receipt was read wrong	Correct the fields on the review screen before Confirm & Save
The receipt could not be read	Retake the photo in good light with the whole receipt in frame, or tap Fill In Details Myself
The reset link says it is invalid	Links expire and work once; tap Request New Link
Changes made offline are missing on another device	Open the app on the first phone while online so it can upload them
The web app looks outdated	Hard refresh the page with Ctrl + Shift + R
